

Servo Feeder (T-SF100) Control System

TAKEUCHI developed a motion control system of Servo Feeder (T-SF100).

We realized the complete synchronous control using AC servo motor in three axis ; Feeder axis, Gobber axis, Shear axis

Specification

Gob weight ; Max. 800g
 Cut cycle ; Max. 15dpm
 Gobber rotation speed ; Max. 10rpm

Gobber Rotation Control

Realize phase control with a Feeder cycle.
 ● Phase precision ... 1/6 degree

Feeder Control

Provide the high precision of Feeder lower dead point.
 Make a Feeder curve using an electronic cam.
 Easy to change a Feeder curve by passage point setting at real-time.
 Easy to support Two Gob system by passage point adding.
 ● Feeder cycle precision 3.5ms
 ● Stroke dispersion 0.2%

Shear Cut Control

Speedup of Shear cut.
 Minimize the dispersion of a Shear cut timing.
 Cut timing dispersion 15ms
